# **Todo-List Project**

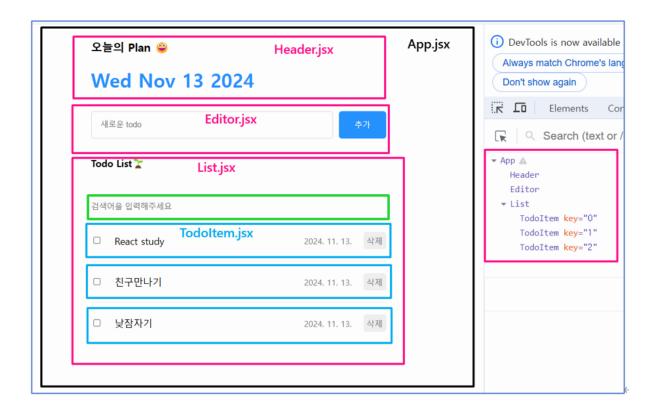

## 주요기능

- 1)전체출력
- 2) 추가(등록)
- 3)수정(checkbox 상태변경)
- 4)삭제
- 5)검색

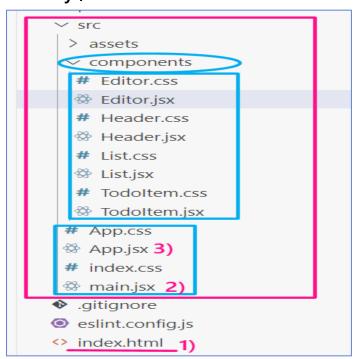

## 전체 UI

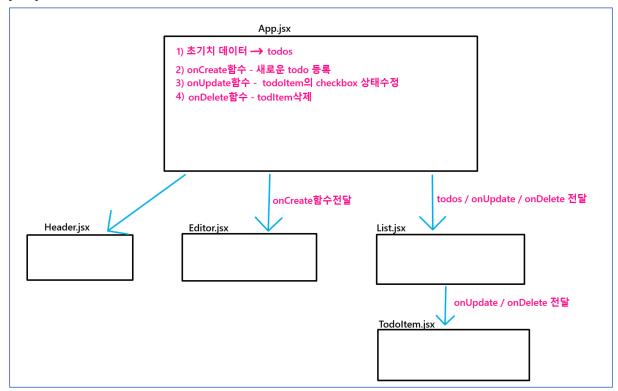

## Component 구조

## directory구조

## props 전달과정

#### 알아야 하는 개념

- 1) Component 분리
- 2) CSS적용
- 3) 이벤트처리
- 4) Props
- 5) useState
- 6) useRef
- 7) filter함수 , map함수

## UI완성하기

## Header.jsx

```
import "./Header.css";
 2
    const Header = () => {
 3
4
        return (
 5
            <div className="Header">
                <h3>오늘의 Plan∰</h3>
6
                <h1>{new Date().toLocaleString()}</h1>
7
            </div>
8
9
        );
10
    };
11
    export default Header;
12
```

## Window key + . 을 누르면 "이모지" 아이콘 나온다.

#### **Header.css**

```
1 .Header > h1{
2   color: □ rgb(37, 147, 255);
3 }
```

### **Editor.jsx**

```
2
    import "./Editor.css";
    import { useState } from 'react';
 3
 4
    const Editor = () => {
        const [content, setCotent] = useState("");
 5
        return (
 6
 7
             <div className="Editor">
                <input type="text" placeholder='새로운 todo' value={content}</pre>
 8
9
                onChange={(e)=>setCotent(e.target.value)}/>
                 <button>추가</button>
10
            </div>
11
12
        );
13
   };
14
15 export default Editor;
```

#### **Editor.css**

```
1
    .Editor{
 2
       display:flex;
 3
        gap: 10px;
 4
 5
 6 /*input 요소 css */
 7
    .Editor input{
       flex: 1; /*1은 부모요소에 벗어나지 않는 범위내에서 최대 크기로 나온다. */
 8
9
       padding: 15px;
       border: 1px solid ☐rgb(220,220,220);
10
       border-radius: 5px;
11
12
13
   /*button요소 css*/
14
15
   .Editor button{
       cursor: pointer;
16
       width: 80px;
17
       border: none;
18
       color: □white;
19
20
       background-color: ☐rgb(37,147,255);
       border-radius: 5px;
21
22
```

#### List.jsx

```
2
    import TodoItem from './TodoItem';
    import "./List.css"
 3
 4
    import { useState } from 'react';
    const List = () => {
 5
         const [search, setSearch] = useState("");
 6
7
         return (
8
             <div className="List">
9
                 <h4>Todo List <a>T</h4></h4></h4></h4>
                 <input placeholder='검색어를 입력해주세요.' value={search}</pre>
10
11
                 onChange={(e)=>setSearch(e.target.value)} />
12
                 <div className="todos_wrapper">
13
                     <TodoItem />
14
15
                     <TodoItem />
                     <TodoItem />
16
                 </div>
17
18
19
             </div>
20
         );
21
    };
22
23 export default List;
```

#### List.css

```
.List{
 2
        display: flex;
 3
        flex-direction: column;
4
        gap: 20px;
5
6
7
    .List > input{
8
        width: 100%;
9
        border: none;
        border-bottom: 1px solid ☐rgb(220, 220, 220);
10
        padding: 15px 0px;
11
12
13
14
    .List > input:focus{
15
        outline: none;
        border-bottom: 1px solid ☐rgb(37, 147, 255);
16
17
18
19
     .List > .todos_wrapper{
20
        display: flex;
        flex-direction: column;
21
        gap: 20px;
22
23
24
```

#### **Todoltem.jsx**

```
import "./TodoItem.css";
 2
    const TodoItem = () => {
 3
 4
        return (
 5
             <div className="TodoItem">
                 <input type="checkbox" />
 6
                 <div className="content">내용</div>
 7
                 <div className="date">날짜</div>
 8
                 <button>삭제</button>
 9
             </div>
10
11
         );
12
    };
13
14
    export default TodoItem;
```

#### **TodoItem.CSS**

```
.TodoItem{
       display: flex;
       align-items: center;/*열을 기준으로 가운데 정렬*/
3
        gap: 20px;
 4
 5
        padding-bottom: 20px;
        border-bottom: 1px solid □rgb(240, 240, 240);
 6
8
9
    .TodoItem input{
10
       width: 20px;
11
12
    .TodoItem .content{
13
      flex : 1;/*1은 부모요소에 벗어나지 않는 범위내에서 최대 크기로 나온다. */
14
15
16
17
     .TodoItem .date{
     font-size: 14px;
18
       color: ■gray;
19
20
21
22
   .TodoItem button{
23
     cursor: pointer;
      color: ■ gray;
24
25
      font-size: 14px;
      border: none;
26
27
      border-radius: 5px;
28
      padding: 5px;
29 }
30
```

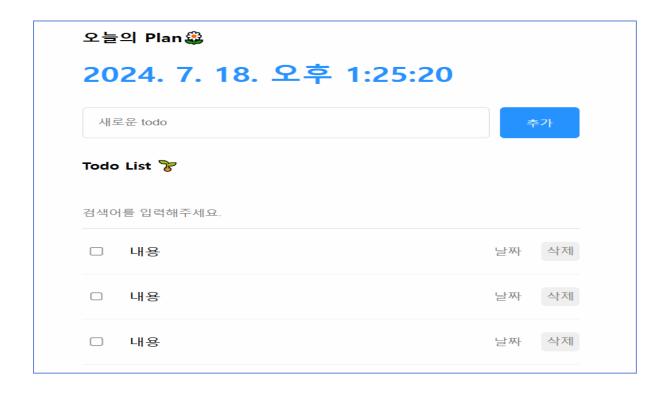

### App.jsx

```
2
    import './App.css'
    import Header from './components/Header'
3
    import Editor from './components/Editor'
4
    import List from './components/List'
5
6
7
    function App() {
8
      return (
9
        <div className="App">
10
         <Header/>
11
         <Editor/>
         <List/>
12
        </div>
13
14
    }
15
16
17
    export default App
18
```

#### App.css

```
1 .App{
2    display: flex;
3    flex-direction: column;
4    gap: 10px;
5    width: 500px;
6    margin: 0 auto;
7 }
```

### UI 디자인 완성 후 모습

#### 초기치 데이터 세팅하기

#### App.jsx

```
7 //랜더링이 될때 다시 실행되지 않아도 되기에 함수 밖에 선언한다.
   const mockData = [
     {id:0, isDone:false, content:"React study", date: new Date().getTime()},
     {id:1, isDone:false, content:"친구만나기", date: new Date().getTime()},
10
    {id:2, isDone:false, content:"낮잠자기", date: new Date().getTime()},
11
12
   1;
13
14
    function App() {
15
     const [todos , setTodos] = useState(mockData);
16
17
      return (
18
        <div className="App">
19
        <Header/>
20
        <Editor/>
21
        <List todos={todos}/>
22
        </div> List -> Todiltem 에서 사용 할 수 있게 props로 전달한다.
23
24
```

#### List.jsx

```
const List = ({todos}) => {
 5
 6
         const [search, setSearch] = useState("");
 7
         return (
             <div className="List">
 8
                 <h4>Todo List <a>T</h4></h4></h4>
 9
                 <input placeholder='검색어를 입력해주세요.' value={search}</pre>
10
                 onChange={(e)=>setSearch(e.target.value)} />
11
12
                 <div className="todos wrapper">
13
14
15
                          todos.map((todo)=>{
                          return <TodoItem key={todo.id} {...todo} />
16
17
                          })
18
19
                 </div>
20
```

#### Todoltem.jsx

#### 적용 후 화면
